

Dear Scientist and Student,

Kindly print the below information and keep it on the notice board or the desk of your library, department and meeting.

Please forward by email the below information.

1. INFORMATION ABOUT THE SCIENTIFIC JOURNAL

2. INFORMATION ABOUT THE SCIENTIFIC SOCIETY

INFORMATION ABOUT THE SCIENTIFIC JOURNAL

Journal of Food, Agriculture & Environment (JFAE)

Editor in Chief
Raina Niskanen PhD, Finland
(info@world-food.net)

Research on food and agriculture is progressively moving towards an interdisciplinary study of sustainable food production to meet the demand of growing human populations. However, as more countries industrialize, there is an increase in air and water pollution, soil contamination, as well as elevated levels of global warming and depletion of the ozone layer. The unscientific use of land and over-exploitation of natural resources for enhancing food production and productivity have robbed us of our balanced environment and have also put a heavy toll on human and animal health. This complex scenario challenges researchers to develop and test more appropriate technologies for sustainable agriculture. Research, for example, is being carried out to overcome problems of environmental stress, minimize the use of pesticides, slow post-harvest storage losses, and explore nutrition, animal science and human nutrition, by using conventional and new technologies such as biotechnology, mutation-assisted breeding and molecular biology.

Aims and scope

The Journal of Food, Agriculture, and Environment (JFAE) is dedicated to meet the need for a new journal that can encompass this wide range of topics and in an interdisciplinary approach. The journal publishes (in print and on-line versions) peer-reviewed original research, protocols, critical reviews or short communications on the three closely interdependent areas and is a unique attempt on interdisciplinary studies that explore the intersection of food, agriculture and environmental sciences.

Audience

Scientists, researchers, students, professionals or policy-makers involved in food, human nutrition or human health, agriculture, or animal science, environment, biotechnology, forestry.

Journal subject area

I. Food & health (e.g., food chemistry and biochemistry, biotechnology, microbiology, processing and engineering, safety and toxicology, contamination, policy and consumer, human nutrition and health promotion, sensory and nutritive quality of food, animal health and nutrition, post harvest science and technology)

II. Agriculture (e.g., crop and livestock production and management, plant nutrient management and soil fertility, plant breeding and genetics, biotechnology, biodiversity and genetic resources, plant physiology and molecular biology, plant protection and pest management, animal science, IT application in agriculture).

III. *Environment* (e.g., agro ecology, natural resources management, environmental protection, environmental contamination and monitoring, biodiversity, sustainable agriculture, agriculture and wildlife, soil and water quality).

IV. *Human dimensions* (e.g., poverty and hunger, food relief and development programs, food and international security, social dimensions of food preference, economics and politics of food policies, urban food systems).

V. *General services* (e.g., a special JFAE issue of a specific meeting or conference, abstracts from meetings, symposiums, conferences etc., book reviews, summary of new project(s), announcements and employment opportunities, advertisement).

Manuscripts should not exceed 20 pages, 1.5 line spacing, 12 fonts, 2.5 margins including all relevant materials. They can be sent by e-mail or postal address. Once the manuscript is received we will send it to 1 or 2 reviewers. JFAE is indexed by Biology Browser database, Biosis, CAS, CABI, IFIS, FSTA, CSA, Scirus Elsevier, Med Bioworld, Apic. Abstracts, Index Copernicus, FAO-Agris-Caris. In the process of assessing its impact factor with the JCR of ISI, Pascal Database and others.

Kindly inform (through emails, forums, meetings or any network system) your students, colleagues, network and libraries or departments that the online access to some journal issues are free to all (Trial).

INFORMATION ABOUT THE SCIENTIFIC SOCIETY

A Global Food, Agriculture and Environmental Network (Scandinavian Perspectives)

Introduction about ISFAE

The International Society of Food, Agriculture and Environment - ISFAE is an independent organization. It is a lively interface between academicians and professionals or industries. It is dedicated to meeting the need for new opportunities that can encompass interdisciplinary approaches. The value of an international organization, such as ISFAE, is primarily in the networking opportunities it provides. The society especially provides an open global forum for the exchange of scientific information on Food, Agriculture and Environment, and related issues. ISFAE was officially founded in 2003 in Helsinki, Finland by an international panel of professors and experts bringing diverse field of expertise to a common forum. The executive secretariat of ISFAE, led by an executive committee with a secretary general, has already created core structures. This provides a solid foundation for the society to flourish, and bring members from different corners of the world under its umbrella. The society now has an impressive web presence (www.isfae.org) and its own scientific journals and books. ISFAE offers multifunctional services not only for scientists and students, but also to international orientated companies and individuals. ISFAE is also considered as a tool for safeguarding and retrieval of information on the agronomic performance of crop productions in relation to agro-ecological conditions, cultivation practices, the occurrence of pests and diseases, and handling operations. The aim of ISFAE is to bring together students, scientists and professionals, and to assist them in publishing recent findings on various topics to stimulate and coordinate meetings, to disseminate news and information, and to promote science and development. ISFAE implements and puts into practice projects and consultancy in all its forms and facets.

How can ISFAE assist you?

The connections must be opened for global working ground

-ISFAE invites students, scientists and experts to publish their recent findings or achievements in scientific publications such as the journals of Food, Agriculture & Environment (JFAE), which accepts manuscripts on original research work, critical or short reviews in food science, human nutrition/health, agriculture and environment. Our scientific journals consider manuscripts on biotechnology, ethical and socioeconomic issues related to modern agricultural or environmental sciences. We soon are planning more online scientific journals to give more choices to scientists/experts.

-[Our journals](#) accept abstracts of articles presented at meetings or summary of meetings, special courses/lectures or events, etc. On the ISFAE website, we have space for those who wish to publish online a work report, thesis, teaching material or to inform about an ongoing or previous project(s). Moreover, ISFAE also strongly encourages scientists/experts to submit a book proposal (you should first send a two-page summary of your book via email or air mail).

Cooperation or Partnership

ISFAE strengthens dialogue, cooperation, and research to overcome the major challenges of humanity to ensure food security for current and future generations. ISFAE emphasizes the need to develop projects, while considering knowledge and input. Development projects today are more process oriented than in the past. What is therefore required is capacity building in a wide variety of fields. Based on experience and consultants' skills, ISFAE has established a solid basis for supplying relevant and appropriate services. The need for technology in development projects varies, but the tendency is that specialized technology is more and more needed. To optimize provision of technology, we also emphasize on the followings:

- Introducing new technologies and concepts
- Turning key solutions for setting up projects from "concept to commissioning and beyond"
- Networking with research centres, universities, companies and organizations
- Technology assessment and know-how transfer
- Project profiles, feasibility studies, market studies, and detailed project reports and publications
- Assist, aid, and promote activities of companies through innovations and continuous improvements

In fact, research and development on food and agriculture is progressively moving towards an interdisciplinary study of sustainable food production to meet the demand of growing human populations. As more countries industrialize, there is an increase in air and water pollution, soil contamination, as well as elevated levels of global warming, and depletion of the ozone layer. This complex scenario challenges researchers to develop and test more appropriate technologies for sustainable agriculture. ISFAE can provide instructions, recommendations, special reports or guides on specific issues. English is the language used during the work, however, upon request, we can translate our reports into other languages. With our network of experts, we can investigate the problems that affect crop quality and handling operations. We can establish field experiments, search for special materials or information for farmers, and advertise or market some of their products. Companies or industries can consider us as a potential partner in some of their projects as we can act as one of their unit operating in the Baltic region. Companies can make announcements or advertisements on ISFAE's online and in printed journals. For keeping up with the newest information, we can organise exchange trips and visits to various sites.

We welcome proposals or suggestions in order to be as helpful as possible to ISFAE members. We also assist head of departments and institutes to organizing meetings, courses, seminars and exhibitions under the auspice of ISFAE. The main benefit of ISFAE membership is to get free access to online journals, and be able to purchase our publications at reduced rate.

With the collaboration of known experts and institutions ISFAE is willing to organize time to time some meetings related to one the following fields Food, Human Nutrition, Animal Science, Agriculture, Biotechnology or Environment, respectively". We also provide opportunities for institutions, companies or industries to exhibit their products, equipment, or materials at its conferences. We collaborate with several institutions and industries, which operate mostly in the field of food and nutrition, agriculture, and environment.

ISFAE offers the possibility to institutes or universities to advertise or to make announcements in journals, which have a wide reach to many institutions, companies and individuals worldwide. Especially in the developing countries

To get news on job vacancies or employment opportunities, you should place your CV in ISFAE website or join [ISFAE](#) to get access to our journals or information on job opportunities. We will keep your CV or job announcement in our site. You are welcome to advertise yourself and show your skills so that potential employers may contact you thereafter.

Organizing events

The secretariat and the executive committee of the scientific society of Food, Agriculture and Environment invite heads of departments, heads of institutes or decision makers to organize self-funded local, regional or international events such as meeting, workshop, symposium, conference, seminar, course, training, exhibition or other related happenings. With the collaboration of *WFL* Publisher, ISFAE will take charge of resulting publication, printing and distribution of proceedings, reports, or/and books, if needed. Events will be advertised

for free in both our printed and online journals. With the collaboration with *WFL* Publisher, ISFAE may plan a *Special Journal* issue (which includes only selected/reviewed manuscripts).

Text editing and evaluation

The society offers multifunctional services. One of them is to translate scientific and professional publications on dozens of different languages.

We accept all documents, regardless of length and complexity of text (e.g. math formulas, graphs, etc.). You can save valuable time by delegating to us the tedious work involved with document, either for publication or for final presentation. Using the knowledge and expertise of eminent and well known scientists, we also evaluate the academic and scientific materials. We are dedicated to become a reliable resource for your projects, based upon a strong customer orientation and personal dedication. Customer service and satisfaction are of utmost importance for us and for this reason; we are constantly interacting with you during the work process.

Work Placement - Practice or Training

ISFAE also hosts students for a short or a long-term work placement or training for a thesis work. The students will get involved in some of the tasks related to IT tasks, graphic design, communication, business, marketing, office tasks in addition to possible field work. We welcome exchange visitors as well. Students who wish to do their work placement or training at ISFAE, should cover the costs of accommodation, transportation and insurance. ISFAE will provide recommendation letter or a contract to the students' institute so that the students benefit from some international grants if any.

Teachers/students may circulate info regarding training opportunities at ISFAE by any means, e.g., in their local administrative network services, sending emails etc. For more information contact our office (see address below).

ISFAE welcomes sponsorships

We are principally a volunteer-driven organization, and a major portion of our small operating budget comes from individual contributions. [ISFAE](#) invites individuals, companies/corporations, organizations and institutions to sponsor/support its activities. We welcome financial aid or technical support. The ISFAE members benefit of free services and access to online journals as well as a multifunctional services. To join ISFAE, you need to fill the membership form (download it from the website), then register and obtain your personalised username and password from the ISFAE office (see address below).

As an organization that has emerged from academic roots and values, at all times, the [ISFAE](#) will rigorously adhere to both the requirements and principles behind fundraising, achievements and developments.

We invite institutions to make a link to (<http://www.world-food.net/>), and please feel free to contact our office if you have any suggestion or request.

We look forward to serving you!

R. Dris PhD.
